STEAM MACHINES

Enter the age of steam — where iron, fire, and craftsmanship shaped the first giants of mechanical engineering.

The SteamX collection brings legendary steam-powered machines to scale, recreated with attention to detail for modelers and collectors alike.

**AN ICON OF
STEAM ENGINEERING —
RECREATED IN 1:16 SCALE.**

Designed as an exact reproduction of the historic Burrell engine "Old Duch" (AF 4393, serial 2417, built in 1901), this model captures the proportions, character, and engineering details of the original machine.

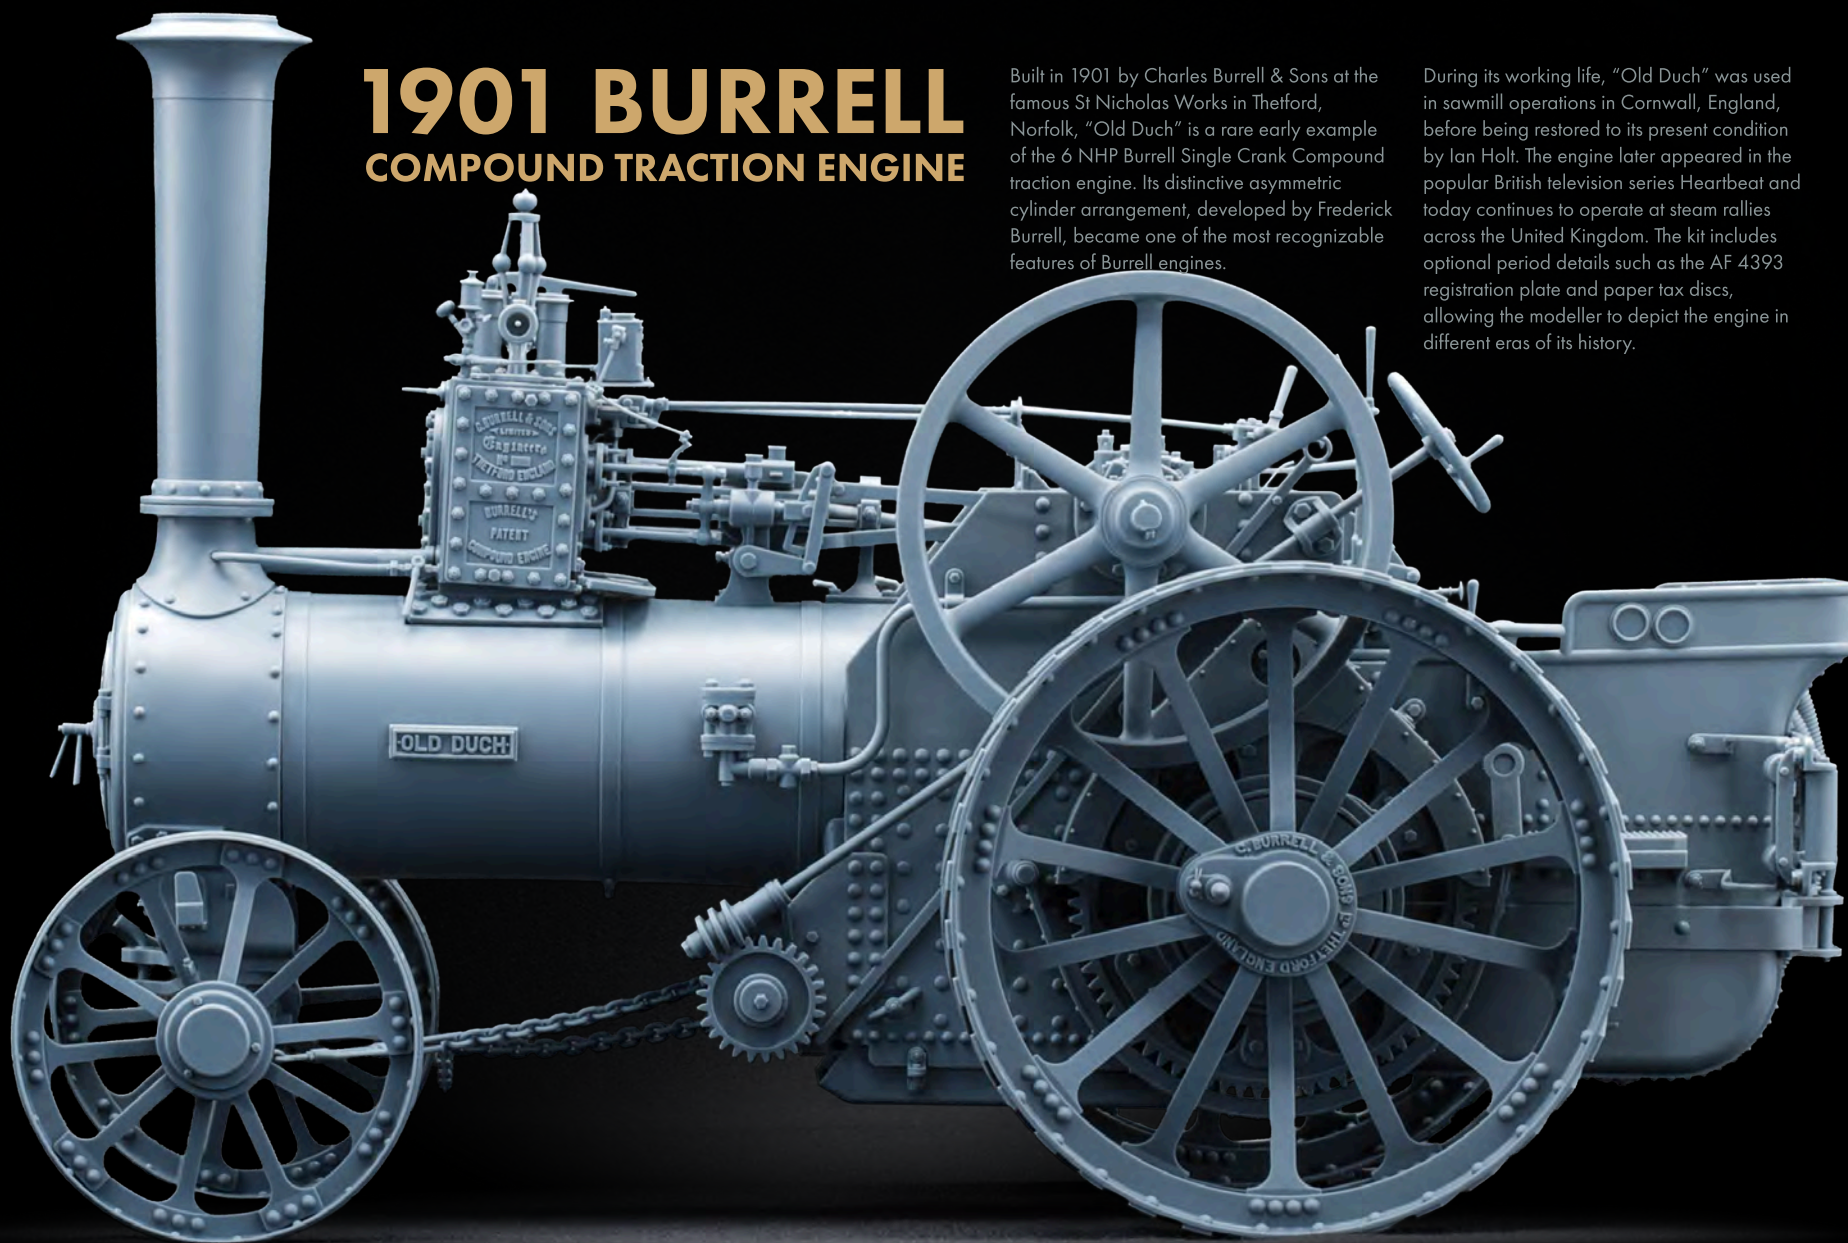

1901 BURRELL COMPOUND TRACTION ENGINE

Built in 1901 by Charles Burrell & Sons at the famous St Nicholas Works in Thetford, Norfolk, "Old Duch" is a rare early example of the 6 NHP Burrell Single Crank Compound traction engine. Its distinctive asymmetric cylinder arrangement, developed by Frederick Burrell, became one of the most recognizable features of Burrell engines.

During its working life, "Old Duch" was used in sawmill operations in Cornwall, England, before being restored to its present condition by Ian Holt. The engine later appeared in the popular British television series Heartbeat and today continues to operate at steam rallies across the United Kingdom. The kit includes optional period details such as the AF 4393 registration plate and paper tax discs, allowing the modeller to depict the engine in different eras of its history.

1:16 SCALE MODEL

A Machine from the Age of Steam

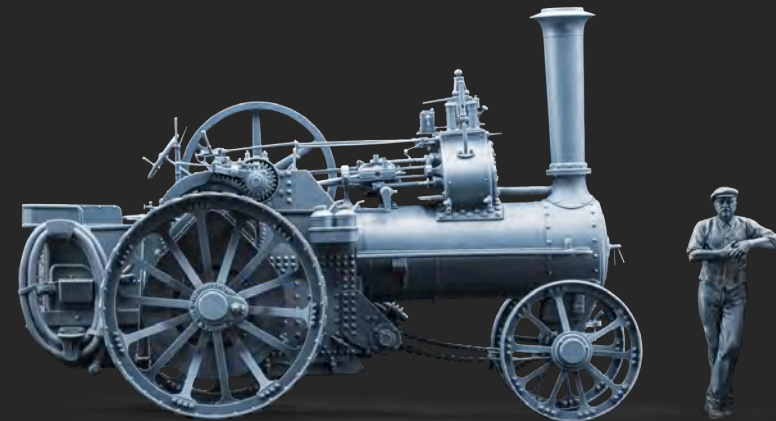

Built in 1901 by Charles Burrell & Sons, this General Purpose Engine reflects the era when steam powered agriculture, transport, and industry across Britain. Today, engine No. 2417 — known as “Old Duch” — remains operational and continues to appear at steam rallies, preserving the sound and motion of early mechanical engineering.

Capturing Every Detail

Every surface, mechanism, and proportion has been carefully studied to translate full-scale engineering into an accurate scale model. Whether viewed from a distance or up close, the model is designed to deliver depth, realism, and a rewarding building experience.

Included in the Set

- 3D-Printed Parts for Model Assembly
- 3D-Printed Figure
- Copper Wire
- Water-Slide Decals
- Assembly and Painting Guide
- Two Paint Schemes

ARMORED
VEHICLES

ARMORED VEHICLES

Scale modeling is entering a new era, where precision, accuracy, and realism are defined by advanced 3D printing technologies.

High-quality scale models and 3D-printed details open new possibilities for modelers, setting a new standard for authenticity and craftsmanship.

1:72 SCALE MODEL

SM-72001

PE parts and Decals included

FCM 50T — FRENCH HEAVY TANK

This highly detailed 3D printed resin scale model kit was developed with a focus on accuracy, fine detail, and an authentic representation of the original vehicle.

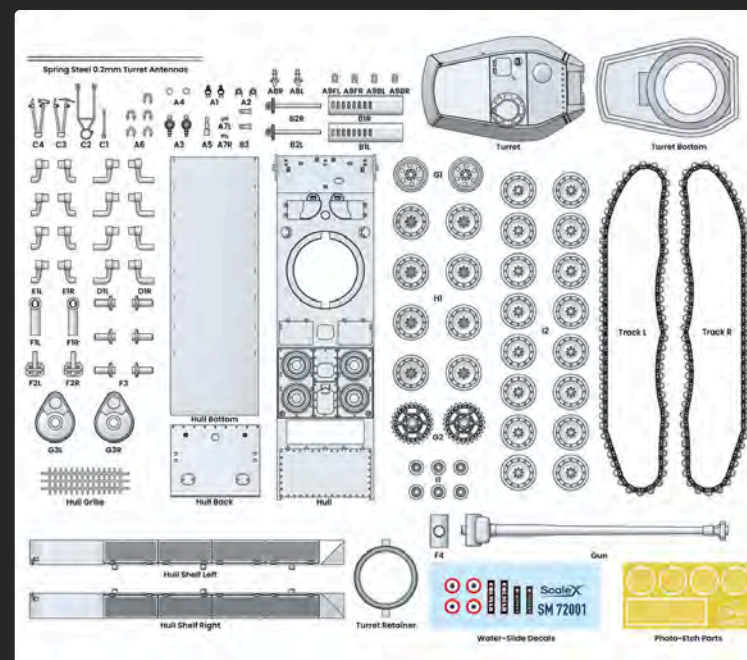

HISTORICAL REFERENCE

The FCM 50T was a French post-war heavy tank project developed shortly after the Second World War, when the French Army sought a new vehicle to replace the Panther tanks received as war reparations and the domestically produced ARL 44.

Designed in late 1945 by Forges et Chantiers de la Méditerranée (FCM) as an alternative to projects such as the AMX-50, the FCM 50T reflected contemporary armored warfare concepts and late-war German influence. The project did not progress beyond the design stage and was never built.

Included in the Set

- Unassembled Resin Model Kit
- Spring steel 0.2 mm turret antennas
- Photo-etched parts
- Water-slide decals
- Two Paint Schemes
- Instruction manual

ARMORED
VEHICLES

AIR DEFENCE

In an era where aerial threats, including drones, have become a defining factor on the modern battlefield, air defense systems play a vital role in protecting infrastructure and cities.

From proven, time-tested platforms to more advanced systems, these machines combine functional design with effective firepower, offering modelers subjects rich in detail and real-world significance.

Modern 3D printing makes it possible to capture this complexity with outstanding accuracy, bringing both classic and contemporary air defense systems to life in miniature form.

1:72 SCALE MODEL

SM-72201

Two Assembly Options and Three Configuration Options in the box

ZU-23-2 — 23 MM ANTI-AIRCRAFT TWIN AUTOCANNON

This highly detailed 3D-printed resin scale model kit has been developed with a focus on accuracy, fine detail, and an authentic representation of the original system.

The model can be assembled in both towing and combat configurations, allowing you to capture different stages of operation and display.

Inside the box, you will find three configuration options: a standard version, a variant with armored shields, and an option featuring textured armored shields for enhanced realism and surface detail.

HISTORICAL REFERENCE

The ZU-23-2 is a Soviet-designed twin-barreled 23 mm anti-aircraft gun introduced in the early 1960s and widely used across the world. Designed as a lightweight and mobile air defense system, it can be rapidly deployed in both towed and stationary combat positions.

Originally developed to engage low-flying aircraft, the ZU-23-2 has proven highly adaptable and remains in active use today. In modern conflicts, it is frequently employed not only against aerial targets, including drones, but also in a ground support role due to its high rate of fire and reliability.

- Detailed step-by-step assembly instructions
- Reference painting guide

UNMANNED SYSTEMS

Unmanned systems have become an essential part of modern warfare, playing a crucial role in reconnaissance, defense, and frontline operations.

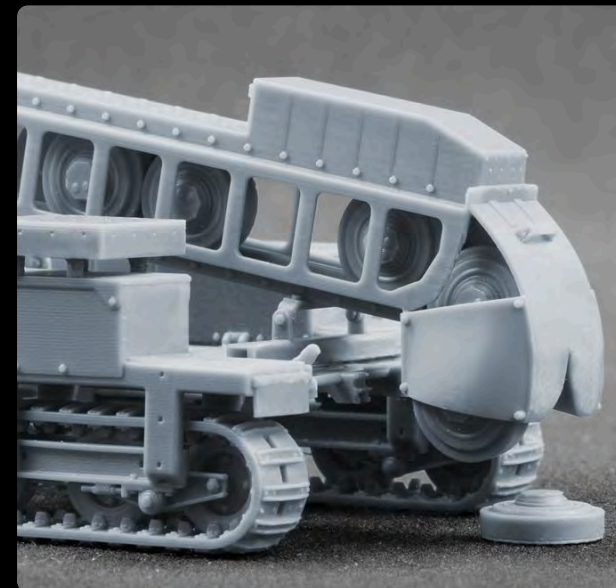

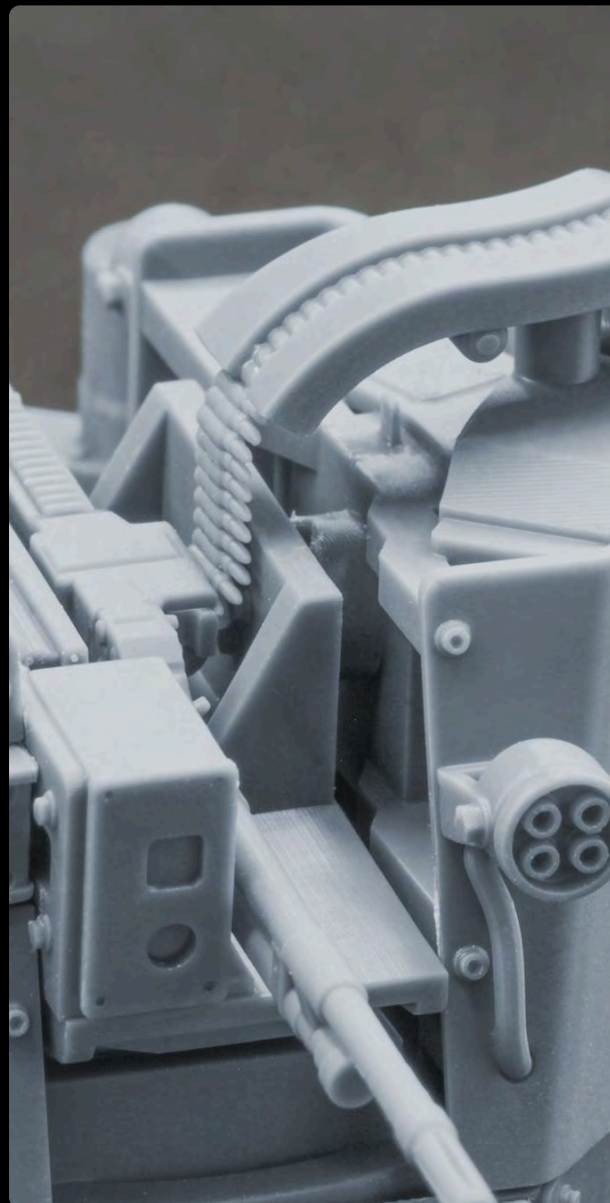

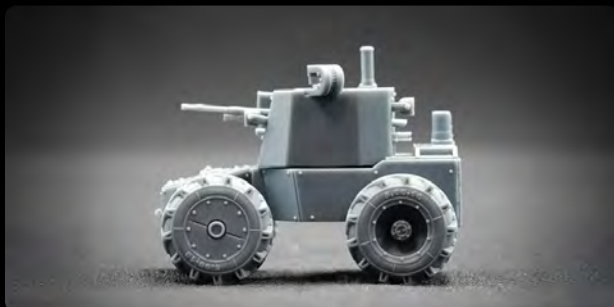

They not only change the course of conflicts but also help save lives by reducing risks for soldiers.

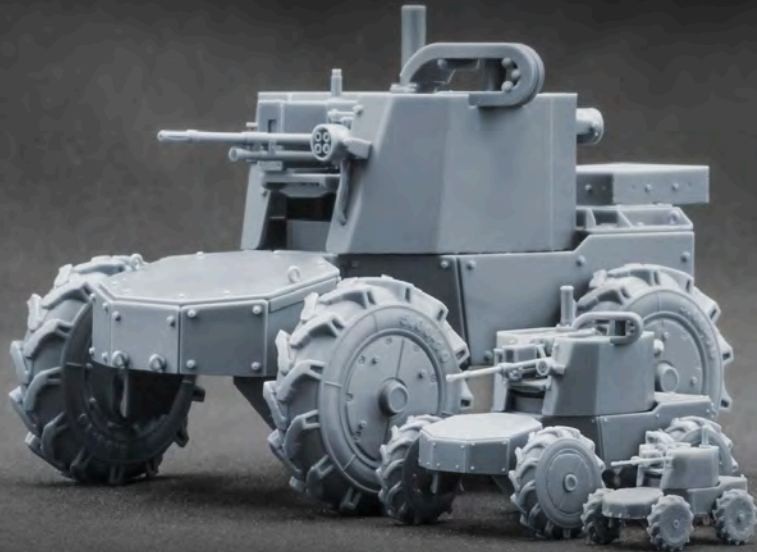

Modern Military Drones in Scale

Inspired by their impact, we bring these advanced machines into the world of scale modeling with our 3D-printed resin kits.

Crafted with precision and attention to detail, our drone models allow hobbyists to expand their creativity, build realistic dioramas, and showcase the technology that defines today's battlefields.

UGV Liut

Ukrainian Strike Ground Drone on the Frontline of the War of the Future

3D-printed scale replica of the Ukrainian UGV Liut. One of the most recognized developments by Ukrainian engineers in the field of robotic combat platforms.

The model is available in multiple version and sizes

- with PKT and MAG Machine Guns
- in 1:72 and 1:35 scales.
- 1:16 scale coming in November

In association with **UGVRobotics**

1:16 SCALE

UGV "LIUT" V2.0 WITH FN MAG — LATE 2025 CONFIGURATION

UGV Liut v2.0 in 1/16 scale is a version that reflects the late-2025 configuration of the real drone, created in collaboration with UGV Robotics, the developers of the actual combat platform.

This is not just a remaster — it is a fully reworked new generation of our model.

WHAT'S NEW IN VERSION V2.0?

- Updated antenna set that matches the latest configuration of the real combat drone.
- Single weapons option — FN MAG, the machine gun currently used on operational units.
- Refined wheels that accurately reproduce the modern prototype.
- Updated detailing to match the late-2025 configuration: suspension elements, bolts and fasteners, surface details, mounting points, and communication modules.

ONE BOX — TWO WEAPON VARIANTS AND FOUR MODELS TO ASSEMBLE

Now both versions — PKT and FN MAG — are available in a single set.

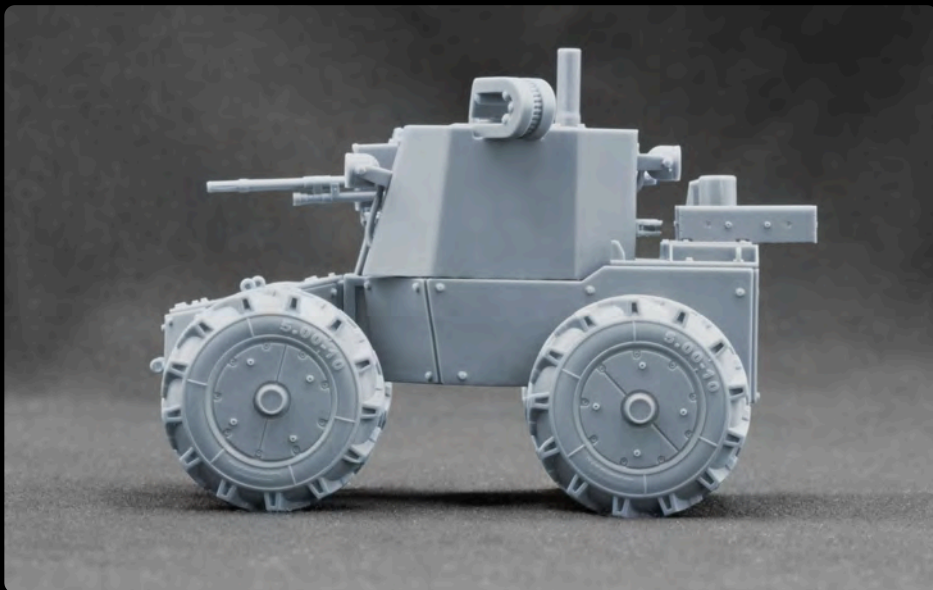

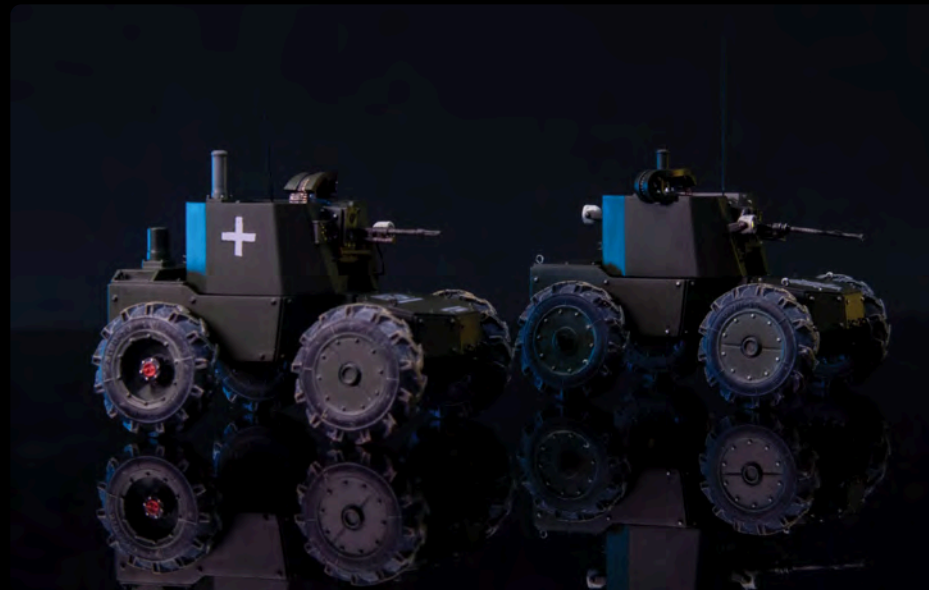

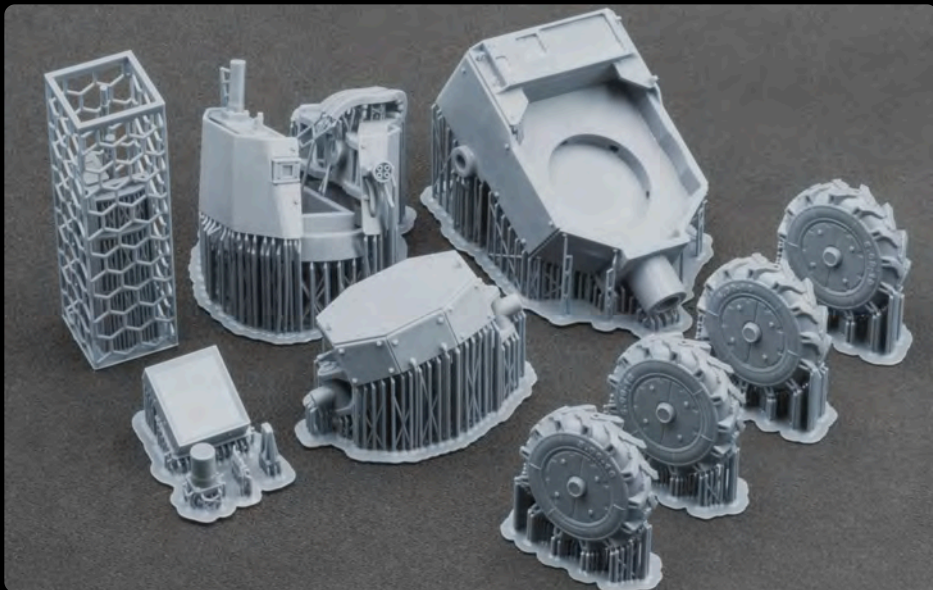

The 1/72 scale set includes parts to assemble four Liut drones:

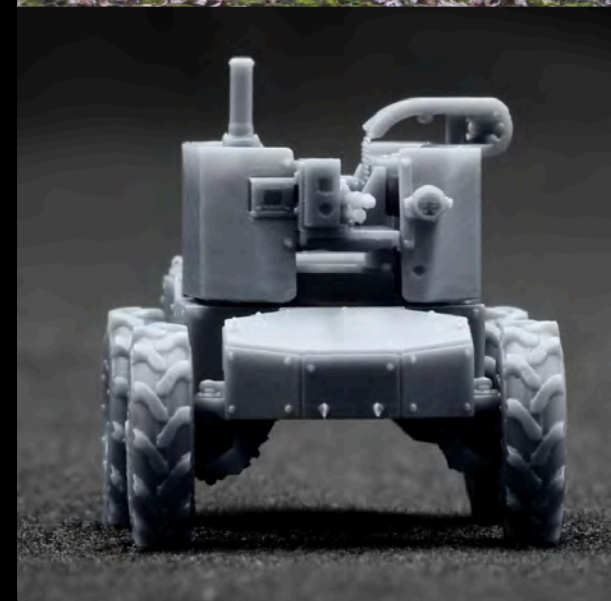

- 2 models equipped with the PKT machine gun,
- 2 models equipped with the FN MAG machine gun.

UNMANNED SYSTEMS

Crafted with passion for the hobby

We thoroughly studied photos, videos, and available technical materials to accurately capture the distinctive features of this machine: the silhouette of the hull, the weapon module, movable suspension, antennas, hinges, and even small technical elements.

You'll receive a highly detailed model that is enjoyable to assemble and impressive to display.

In association with **UGVRobotics**

Thanks to 3D-printing technology, we were able to achieve exact geometry in such a miniature drone, preserving even the smallest elements that would be nearly impossible to replicate by other means.

UGV Liut is more than just a model. It's a collectible item that reflects the modern reality of Ukraine's fight for its territory and independence — a symbol of Ukrainian ingenuity and the strength of resistance shown by both its military and people.

UNMANNED SYSTEMS

UGV "TerMIT"

Adaptive Multi-Role Unmanned Ground Vehicle — Modular, Battle-Ready, Built in Ukraine

3D-printed scale replica of the Ukrainian UGV TerMIT — a compact, highly modular ground drone designed for frontline utility and survivability.

Available in 1:35 scale in several mission-specific options:

- Logistics
- MK19 Grenade Launcher
- Mine-layer

TerMIT — Logistics Variant

The TerMIT logistics variant is designed to transport supplies, equipment, and payloads across difficult terrain while minimizing risk to personnel. Its modular cargo deck allows the platform to support frontline resupply and evacuation tasks.

TerMIT — MK19 Grenade Launcher Variant

The TerMIT MK19 variant integrates a heavy automatic grenade launcher, transforming the platform into a mobile fire-support system capable of engaging infantry and light targets.

TerMIT — Mine-Laying Module Variant

The TerMIT mine-laying variant is configured for remote deployment of mine systems, enabling engineering tasks while keeping operators at a safe distance from hazardous zones.

WW2 ERA WHEELS

Our 3D-printed resin wheels bring new life to classic World War II vehicles, combining historical accuracy with precision craftsmanship.

ScaleX WW2 wheel sets are ideal for creating authentic dioramas and highlighting the machinery that shaped history. Each set is available in both Ordinary and Weighted versions.

Ordinary or Weighted

Which set version fits build best? — In short, both options allow modelers to choose the level of authenticity and storytelling they want to achieve.

Ordinary Wheels
Ideal for factory-fresh or parade-condition vehicles. They highlight a clean, well-maintained look and are perfect for models meant to represent newly produced or museum-restored machines.

Weighted Wheels
Add instant realism by simulating the natural weight and pressure of the vehicle on soft tires. They are best for combat-ready scenes, dioramas with terrain, or weathered vehicles showing the strain of battlefield conditions.

WW2 ERA
WHEELS

FORDSON N TRACTOR /W FARMER-TYPE WHEELS

For a truly authentic late-1930s look, we created a highly detailed 3D-printed wheel set in the farmer configuration — faithfully reproducing the tire types used on period tractors.

Building on the former version, this industrial set recreates the tires used on Fordson N tractors in airfield and industrial roles. Perfect for RAF airfields and industrial scenes from the 1930s–1940s, the set captures the authentic shapes and tread patterns of real industrial tires.

- Front wheels: DUNLOP 3-Rib
- Rear wheels: DUNLOP R-4 Industrial Tractor Lug

WW2 ERA
WHEELS

BLITZ WHEEL SERIES

The Opel Blitz was one of the most widely used light trucks of the mid-20th century, valued for its reliability and adaptability. Its long production history resulted in noticeable differences in wheel disc designs and tire patterns — details often simplified in standard kits.

To bring greater accuracy to your builds, we have developed a series of highly detailed 3D-printed 7.50-20 wheel sets for multiple scales. Based on extensive reference material, each version captures correct proportions, tread patterns, and disc geometry.

The range includes early and late disc types, two tread variants, and both **Ordinary** and **Weighted** options for a clean stance or realistic load effect.

Key Features

- Accurate tire profile and tread pattern
- Correct early- and late-type disc geometry
- Refined rim and hub detail
- Clean mounting for easy installation

Available Versions

- Early Type Disc, Tire v1 7.50-20
- Early Type Disc, Tire v2 7.50-20
- Late Type Disc, Tire v1 7.50-20
- Late Type Disc, Tire v2 7.50-20

Available in Multiple Scales

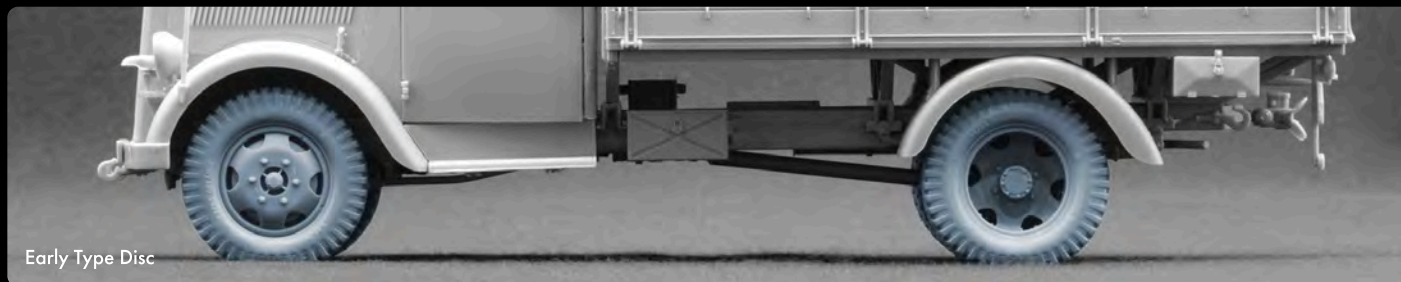

- 1:24 • 1:35 • 1:48 • 1:72

Early vs Late Disc

Early Type Discs

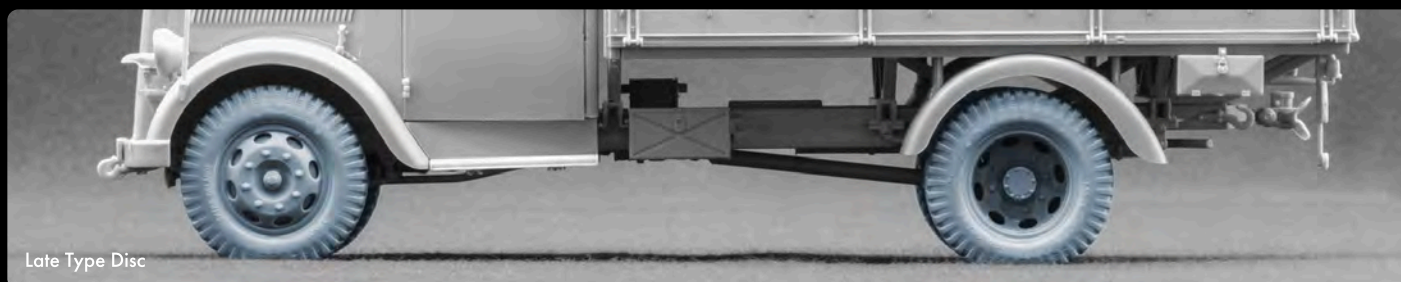

The early Blitz wheel discs featured a 6-bolt mounting pattern with distinctive triangular ventilation openings. This design was commonly seen on earlier production vehicles and became one of the recognizable visual features of the pre-war and early-war Blitz trucks.

Early Type Disc

Late Type Discs

Later Blitz production introduced an updated wheel disc with an 8-bolt mounting pattern and rounded oval-shaped openings. The revised design reflected wartime production changes and can be observed on many mid- and late-production vehicles operating throughout the war.

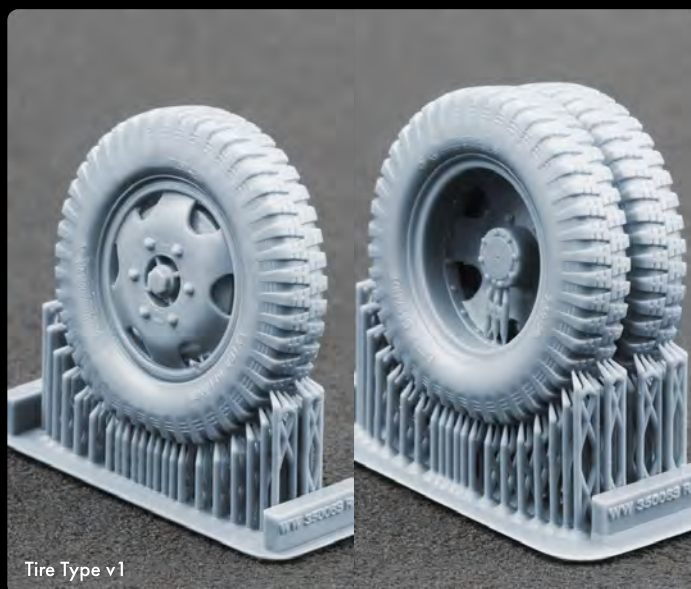

Late Type Disc

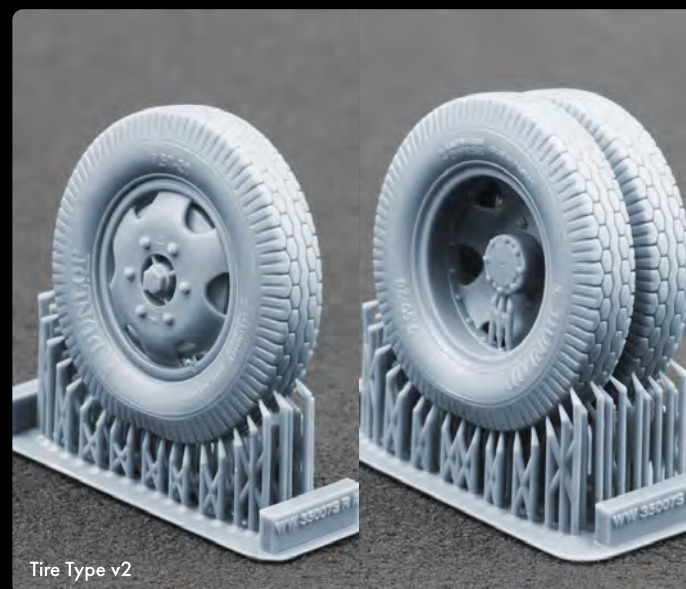

Tires Type v1 & v2

Feature a classic 7.50-20 cross-country tread pattern inspired by early-war German military truck tires. The tread design provides the characteristic rugged appearance commonly associated with Blitz vehicles operating on unpaved roads and in demanding field conditions.

V2 wheels utilize an alternative 7.50-20 tread pattern representing another historically documented tire type used on Blitz trucks during the war. The distinctive tread layout offers a different visual character while remaining accurate to period vehicles and field configurations.

SD.KFZ. 234 PUMA

WHEEL SERIES

The Sd.Kfz. 234/2 "Puma" was one of the most advanced armored cars of its time, combining high mobility with a powerful 50 mm gun in a fully enclosed turret. Designed for reconnaissance, it is known for its speed, engineering sophistication, and distinctive appearance.

To enhance accuracy and realism, we have developed a range of highly detailed 3D-printed wheel sets based on extensive reference material. Each element captures correct proportions, crisp geometry, and authentic surface detail, offering modelers refined options beyond standard kit parts.

Key Features

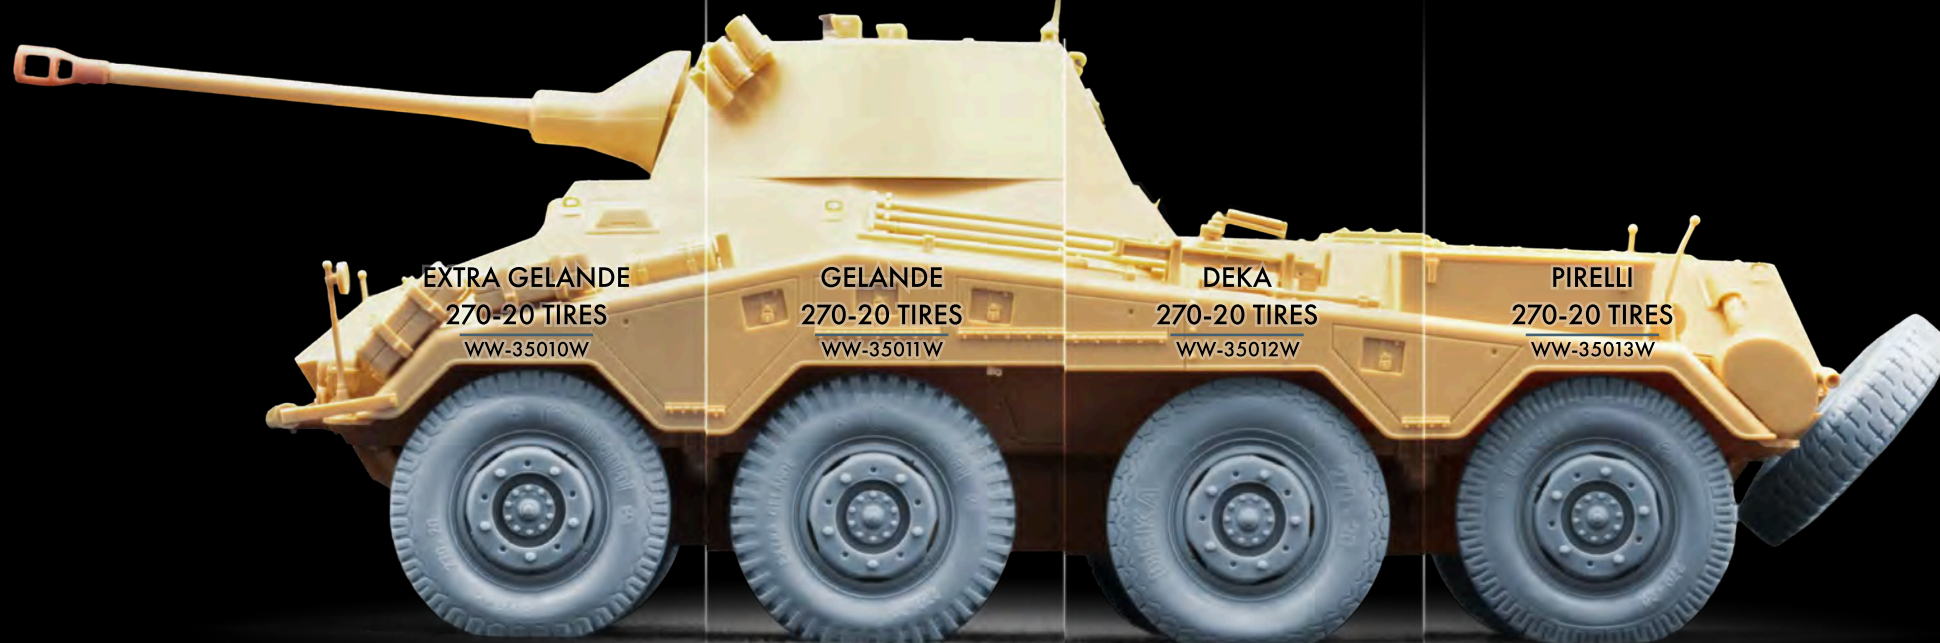

- Accurate wheel offset based on the real vehicle
- Refined tire profile and tread detail
- Crisp rim and hub geometry
- Clean mounting for easy and precise installation
- Designed for compatibility with multiple kits

1:35 SD.KFZ. 234 PUMA MIXED WHEEL CONFIGURATION SETS

Period photographs of the Sd.Kfz. 234 family frequently show vehicles equipped with mixed tire types, often as a result of field repairs, replacement shortages, or maintenance performed during active service.

Photo reference:

Imperial War Museums : <https://www.iwm.org.uk/collections/item/object/205095129>

To reflect these authentic wartime variations, these wheel sets combine different historically documented tread patterns within a single package, allowing modelers to recreate the unique and irregular wheel configurations seen on real vehicles.

WW2 ERA
WHEELS

SCHWIMMWAGEN WHEEL SERIES

The Schwimmwagen Type 166 was the most widely produced amphibious military vehicle of the Second World War. Combining four-wheel drive with a retractable propeller, it offered exceptional mobility on both land and water. Its distinctive design, compact dimensions, and proven reliability made it one of the most recognizable German military vehicles of the war.

To accurately reproduce the numerous wheel and tire variants used throughout the Schwimmwagen's service life, we have developed a comprehensive range of highly detailed 3D-printed wheel sets based on extensive historical research. Each set faithfully captures authentic proportions, crisp surface detail, and manufacturer-specific tire characteristics, providing modelers with historically accurate alternatives to standard kit parts.

Key Features

- Four historically documented tire variants
- Accurate wheel offset and dimensions
- Refined tread patterns and sidewall details
- Crisp rim and hub geometry
- Hub caps included (WW-35014 to WW-35016)
- Designed for compatibility with multiple kits

Available Versions

- GELANDE (5.25-16)
- GELANDE (200-16)
- ENGLEBERT (5.25-16) TIRES
- DEKA (200-12)

M1 / M114 HOWITZER WHEEL SERIES

The M1 and M114 trailers served with Allied and later NATO forces from the Second World War through the Cold War and into modern service. Throughout this period, they were fitted with several distinct 14.00-20 tire types reflecting evolving operational requirements.

To represent these service periods, we have developed three highly detailed 3D-printed wheel sets featuring GOODYEAR, BAR GRIP, and NDT MIL tire patterns. Each set accurately reproduces authentic tread geometry, sidewall details, and wheel proportions for Bronco and Italeri kits.

Key Features

- Each set includes both ordinary and weighted wheels
- Accurate 14.00-20 tire dimensions
- Designed for Bronco and Italeri kits

Three historically accurate variants

- GOODYEAR (14.00-20) — Early production / WW II
- BAR GRIP (14.00-20) — Late production / Cold War
- NDT MIL (14.00-20) — Modern service

KFZ.1 TYPE-170 VK GELANDEREIFEN WHEELS

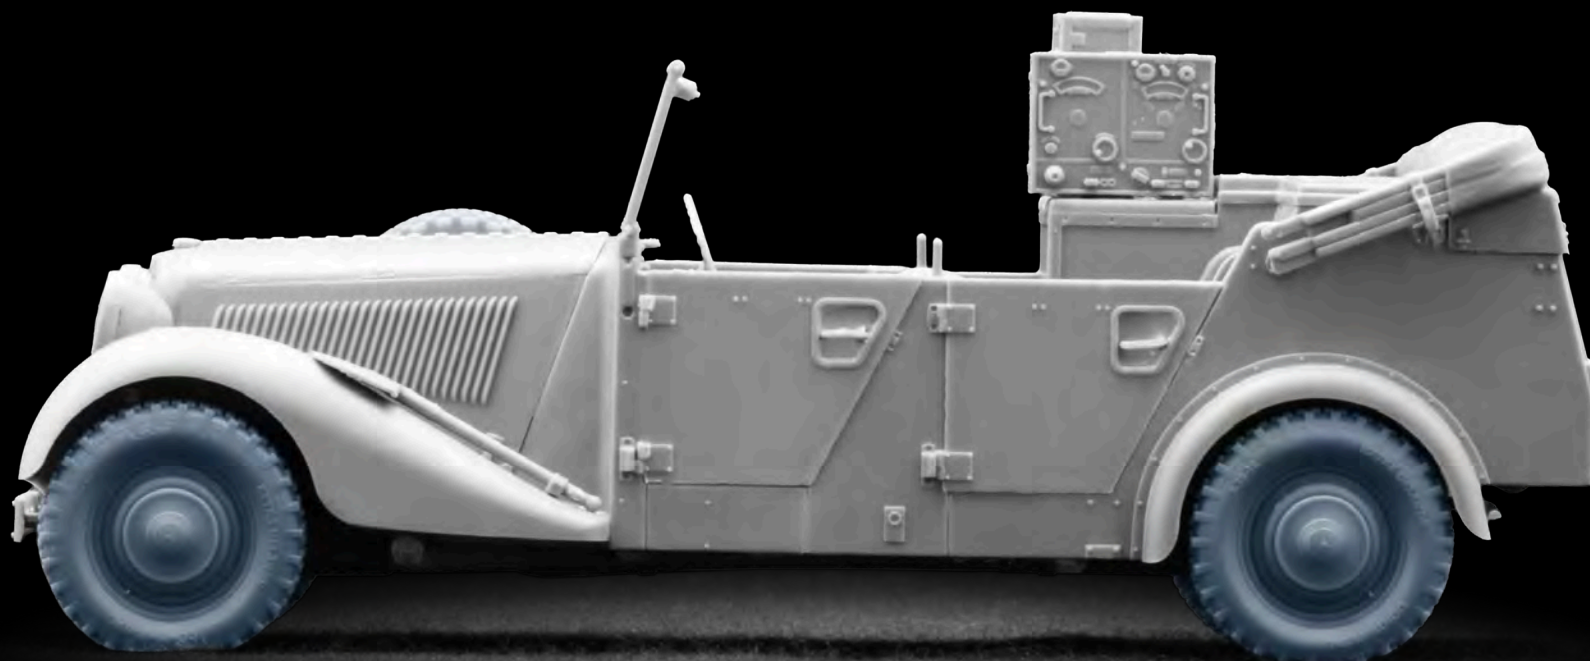

The Kfz.1 Type-170 VK staff car was fitted with Geländereifen (5.25-16) cross-country tires, providing reliable traction and mobility over rough terrain. Their distinctive tread pattern and proportions are characteristic features of this early-war German light vehicle.

Our highly detailed 3D-printed wheel sets accurately reproduce the authentic Geländereifen (5.25-16) tires and are designed specifically for MiniArt kits.

Key Features

- Authentic Geländereifen (5.25-16) tires
- Ordinary and weighted wheel options included
- Accurate tread and sidewall detail
- Designed for MiniArt kits

WW2 ERA
WHEELS

KUBELWAGEN TYPE 82

WHEEL SERIES

The Kübelwagen Type 82 was Germany's standard light military utility vehicle during the Second World War. Renowned for its lightweight construction, excellent cross-country mobility, and mechanical simplicity, it served in virtually every theater of the war and became one of the most iconic military vehicles of its era.

To accurately reproduce the wheel and tire variants used throughout the Kübelwagen's military service, we have developed a range of highly detailed 3D-printed wheel sets based on extensive historical research. Each set faithfully captures authentic proportions, crisp surface detail, and manufacturer-specific tire characteristics, providing modelers with historically accurate alternatives to standard kit parts. Designed specifically for Meng and Tamiya kits, these wheel sets ensure excellent compatibility while significantly enhancing the realism of the finished model.

CTIS vs Non-CTIS versions

The Central Tire Inflation System (CTIS) is a feature on many modern military vehicles, including HIMARS, allowing drivers to adjust tire pressure directly from the cabin. This improves traction, mobility, and performance on different terrains, giving vehicles superior adaptability in combat conditions.

Wheels with CTIS
Wheels with CTIS include detailed air line connections and hub fittings that reflect the advanced engineering of modern combat vehicles. They add technical realism to models, highlighting the sophistication and versatility of machines like HIMARS.

MODERN ERA WHEELS

M142 HIMARS High Mobility Artillery Rocket System

The M142 HIMARS (High Mobility Artillery Rocket System) is an American multiple launch rocket system developed by Lockheed Martin, mounted on a 6×6 chassis from the Family of Medium Tactical Vehicles (FMTV).

Designed to strike targets at ranges up to 300 km (with GMLRS or ATACMS missiles), HIMARS is known for its high accuracy, rapid deployment, and mobility.

HIMARS is in service with the U.S. Army and allied forces, and since 2022 has been actively used by the Armed Forces of Ukraine. It has become a symbol of technological superiority and effective artillery support on the modern battlefield.

MODERN ERA WHEELS

Unimog S 404

The Unimog 404 is a legendary German off-road vehicle produced by Mercedes-Benz from 1955 to 1980. Originally designed as a light tactical truck for the Bundeswehr, it quickly gained popularity among civilian users as well. It served in multiple roles, including cargo

truck, ambulance, equipment platform, and artillery towing vehicle. Its ease of maintenance, modular design, and legendary reliability made it one of the most successful military vehicles of the post-war era.

MODERN ERA WHEELS

ARCHER FH77BW

TWIN 428 1:35 WHEELS

The Archer FH77BW — a modern Swedish self-propelled 155 mm artillery system mounted on a high-mobility 6×6 or 8×8 chassis.

Designed for rapid deployment and accurate fire support, it combines the mobility of a wheeled vehicle with the firepower of a heavy artillery system. Equipped with Twin 482, 750/50 B 30.5 tires, the Archer is capable of traversing challenging off-road and forestry terrain while transporting heavy ammunition loads.

Its wheeled chassis, modern suspension, and precision engineering allow for fast repositioning, making it an effective and flexible asset on the battlefield.

To make the scale model look even more realistic, we've created a set of highly detailed 3D-printed Twin 482, 750/50 B 30.5, available in two versions:

- Ordinary Wheels — for a clean, balanced appearance of your model;
- Weighted Wheels — to replicate the weight of the heavy vehicle and add a natural tire stance

And this is just a beginning as more versions are coming soon!

9K33 OSA I-247B WHEELS

The 9K33 Osa (SA-8 Gecko) utilized distinctive I-247B 1200×500-508 off-road tires, specifically developed to provide excellent mobility across soft terrain while supporting the vehicle's amphibious capabilities. Their characteristic tread pattern, wide profile, and robust construction are defining visual features of this iconic Soviet self-propelled air defense system.

Based on extensive reference material, we have developed highly detailed 3D-printed wheel sets that accurately reproduce the proportions, tread geometry, sidewall details, and hub configuration of the original wheels. Designed specifically for Trumpeter kits, these sets provide an authentic upgrade for modelers seeking greater realism.

Key Features

- Accurate I-247B 1200×500-508 tire dimensions
- Refined tread and sidewall detail
- Crisp hub and rim geometry
- Authentic wheel profile
- Designed for Trumpeter kits

ZU-23-2

The ZU-23-2 is a twin-barrel 23 mm anti-aircraft autocannon, valued for its versatility and effectiveness against low-flying aircraft, light armored vehicles, and infantry targets.

We offer detailed wheel sets that accurately replicate the mobility components of this weapon system, helping modelers achieve a high level of realism in their builds.

D-30

The D-30 is a legendary Soviet 122 mm towed howitzer, best known for its distinctive three-leg mounting system, providing excellent stability and a full 360° field of fire. Introduced in the 1960s, it has seen widespread global use and proven its reliability in numerous conflicts.

Our high-precision wheel sets capture the rugged engineering of this artillery piece, bringing D-30 scale models to life.

M198 Howitzer

The M198 is a 155 mm towed howitzer developed in the United States, designed to deliver powerful and accurate artillery fire while maintaining high tactical mobility. Entering service in the late 1970s, the M198 has been widely used by NATO and allied forces.

Our precision wheel sets faithfully reproduce the suspension and mobility details of this iconic howitzer, enabling modelers to achieve an authentic and realistic appearance.
